Data management concept

Data Management is the set of policies, practices, and procedures for managing information relative to the comprehensive needs of a business.

The main objective of Data Management is to transform available data into valuable resources.

Data

Management decisions

Data Management evolution

Robotics

Data Management evolution

- ✓ Real-time data acquisition
- ✓ Integration of data from all touch points
- ✓ Data storage in a systematic and organized manner
- ✓ Recognition of useful patterns within the data
- ✓ Sharing patterns in view of usability
- ✓ Automation of responses through data-driven logic

Ask the right questions

List for each of the above items the key metrics you are aware of.

Assigning the correct meanings

- ✓ What connections do you make between the observed data?
 - ❖ Data qualify with each other

- ✓ What value should be placed on the observed data?
 - ❖ Data has no color

Assigning the correct meanings

List the main marketing tools for representing data that you are aware of.

Identify missing points

- ✓ What areas in terms of data are uncovered?
 - ❖ Data is never complete

- ✓ How can the gaps be bridged?
 - ❖ Data requires appropriate behaviors to be collected

What data should be analyzed and monitored to understand
Whether Groupon's marketing strategy is working?

After reading the case study:

- Identify phenomena to observe and metrics to use
- Draw a map that identifies both the links between metrics and phenomena and any links between metrics
