Mathematical tools to be exploited

Mathematics

Constitutive relationships

Time domain - Differential form

$$\begin{cases} \nabla \times \vec{\mathbf{e}}(\vec{\mathbf{r}}, t) = -\frac{\partial \vec{\mathbf{b}}(\vec{\mathbf{r}}, t)}{\partial t} \\ \nabla \times \vec{\mathbf{h}}(\vec{\mathbf{r}}, t) = \frac{\partial \vec{\mathbf{d}}(\vec{\mathbf{r}}, t)}{\partial t} + \vec{\mathbf{j}}(\vec{\mathbf{r}}, t) + \vec{\mathbf{j}}_0(\vec{\mathbf{r}}, t) \\ \nabla \cdot \vec{\mathbf{d}}(\vec{\mathbf{r}}, t) = \rho(\vec{\mathbf{r}}, t) + \rho_0(\vec{\mathbf{r}}, t) \\ \nabla \cdot \vec{\mathbf{b}}(\vec{\mathbf{r}}, t) = 0 \end{cases}$$

Even assuming knowledge of the impressed sources $\vec{\mathbf{j}}_0(\vec{\mathbf{r}}, t); \rho_0(\vec{\mathbf{r}}, t)$

Number of independent scalar equations: 7

Number of unknown scalar quantities: 16

Maxwell equations involve a number of unknowns larger than the number of equations!

The additional missing equations are provided by the **constitutive relationships**, which describe interaction of fields and matter from a macroscopic point of view

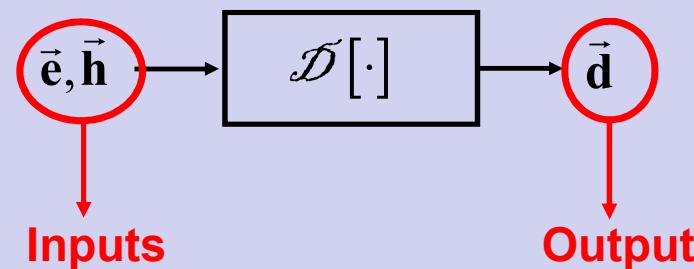

Constitutive relationships

Inductions and currents must be represented in terms of fields

$$\vec{d} = \mathcal{D}[\vec{e}, \vec{h}]$$

$$\vec{b} = \mathcal{B}[\vec{e}, \vec{h}]$$

$$\vec{j} = \mathcal{J}[\vec{e}, \vec{h}]$$

$\mathcal{D}[\cdot]$, $\mathcal{B}[\cdot]$ and $\mathcal{J}[\cdot]$ are functionals which depend upon the medium in which the electromagnetic field is considered and upon the fields themselves.

Constitutive relationships

Linear media

$$\vec{d}_1 = \mathcal{D}[\vec{e}_1, \vec{h}_1]$$

$$\vec{d}_1 + \vec{d}_2 = \mathcal{D}[\vec{e}_1 + \vec{e}_2, \vec{h}_1 + \vec{h}_2]$$

$$\vec{d}_2 = \mathcal{D}[\vec{e}_2, \vec{h}_2]$$

Constitutive relationships

Linear media

■ Local (non-dispersive) media

■ Anisotropic media

$$\vec{d}(\vec{r}, t) = \epsilon(\vec{r}, t) \cdot \vec{e}(\vec{r}, t)$$

$$\vec{b}(\vec{r}, t) = \mu(\vec{r}, t) \cdot \vec{h}(\vec{r}, t)$$

$$\vec{j}(\vec{r}, t) = \sigma(\vec{r}, t) \cdot \vec{e}(\vec{r}, t)$$

$\epsilon(\vec{r}, t); \mu(\vec{r}, t); \sigma(\vec{r}, t)$: 3x3 matrices

■ Local (non-dispersive) media

■ Isotropic media

$$\vec{d}(\vec{r}, t) = \epsilon(\vec{r}, t) \vec{e}(\vec{r}, t)$$

$$\vec{b}(\vec{r}, t) = \mu(\vec{r}, t) \vec{h}(\vec{r}, t)$$

$$\vec{j}(\vec{r}, t) = \sigma(\vec{r}, t) \vec{e}(\vec{r}, t)$$

$\epsilon(\vec{r}, t); \mu(\vec{r}, t); \sigma(\vec{r}, t)$: scalar functions
