Mathematical tools to be exploited

Mathematics

# Mathematical tools that we will exploit today

$$\vec{\mathbf{A}}(\vec{\mathbf{r}}) \cdot [\vec{\mathbf{B}}(\vec{\mathbf{r}}) \times \vec{\mathbf{C}}(\vec{\mathbf{r}})] = \vec{\mathbf{C}}(\vec{\mathbf{r}}) \cdot [\vec{\mathbf{A}}(\vec{\mathbf{r}}) \times \vec{\mathbf{B}}(\vec{\mathbf{r}})] = \vec{\mathbf{B}}(\vec{\mathbf{r}}) \cdot [\vec{\mathbf{C}}(\vec{\mathbf{r}}) \times \vec{\mathbf{A}}(\vec{\mathbf{r}})]$$

# Fields at boundaries

Let us consider nonhomogeneous media, so that constitutive relations may change as a function of space.

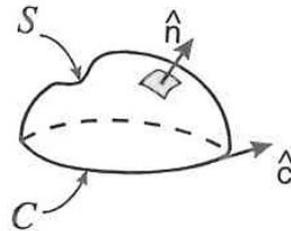

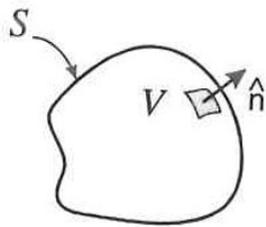

Let us suppose that this change is abrupt across space, that is, we have two media of different characteristics separated by a smooth surface.

The solutions of Maxwell equations can be obtained in both the two regions: matching conditions are needed on the boundaries.

# Fields at boundaries

One example: the medium 1 is a PEC

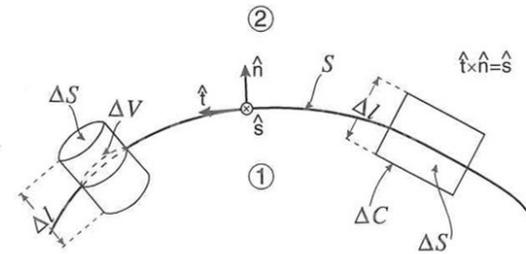

$$\hat{\mathbf{n}} \times (\vec{\mathbf{e}}_2 - \vec{\mathbf{e}}_1) = \mathbf{0}$$

$$\hat{\mathbf{n}} \times (\vec{\mathbf{h}}_2 - \vec{\mathbf{h}}_1) = \vec{\mathbf{j}}_s$$

$$(\vec{\mathbf{d}}_2 - \vec{\mathbf{d}}_1) \cdot \hat{\mathbf{n}} = \rho_s$$

$$(\vec{\mathbf{b}}_2 - \vec{\mathbf{b}}_1) \cdot \hat{\mathbf{n}} = 0$$

$$(\vec{\mathbf{j}}_2 - \vec{\mathbf{j}}_1) \cdot \hat{\mathbf{n}} = -\frac{\partial \rho_s}{\partial t}$$

$$\vec{\mathbf{e}}_1 = \mathbf{0}$$

$$\vec{\mathbf{h}}_1 = \mathbf{0}$$

$$\vec{\mathbf{d}}_1 = \mathbf{0}$$

$$\vec{\mathbf{b}}_1 = \mathbf{0}$$

$$\hat{\mathbf{n}} \times \vec{\mathbf{e}}_2 = \mathbf{0}$$

$$\hat{\mathbf{n}} \times \vec{\mathbf{h}}_2 = \vec{\mathbf{j}}_s$$

$$\vec{\mathbf{d}}_2 \cdot \hat{\mathbf{n}} = \rho_s$$

$$\vec{\mathbf{b}}_2 \cdot \hat{\mathbf{n}} = 0$$
