The radiation condition

$$\vec{e} \cdot \hat{i}_r = 0$$

$$\vec{h} \cdot \hat{i}_r = 0$$

$$\vec{e} - \zeta \vec{h} \times \hat{i}_r \sim o\left(\frac{1}{r}\right) \quad \left(\text{and thus } \zeta \vec{h} - \hat{i}_r \times \vec{e} \sim o\left(\frac{1}{r}\right) \right)$$

as $r \rightarrow \infty$

.. on a sphere of radius r
centered in the origin of the
reference system, being \hat{i}_r
the radial unit vector

$\zeta = \sqrt{\frac{\mu}{\epsilon}}$ is the intrinsic resistance of the medium, which is assumed homogeneous, isotropic, nondispersive and lossless at infinity

$$\vec{s} = \frac{|\vec{e}|^2}{\zeta} \hat{i}_r = \zeta |\vec{h}|^2 \hat{i}_r$$

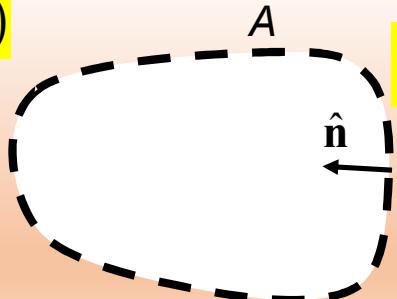

$$\vec{e} \sim O\left(\frac{1}{r}\right)$$

$$\vec{h} \sim O\left(\frac{1}{r}\right)$$

as $r \rightarrow \infty$

Uniqueness (TD-Exterior Problem)

$$\vec{e}(\vec{r}, t_0), \vec{h}(\vec{r}, t_0)$$

$$\hat{n} \times \vec{e} \text{ (or } \hat{n} \times \vec{h})$$

$$\vec{e}(\vec{r}, t), \vec{h}(\vec{r}, t)$$

I Consider a source distribution $\vec{j}(\vec{r},t)$ with its associated electromagnetic field (\vec{e}, \vec{h})

II Consider a (smooth) surface A with an everywhere defined unit normal \hat{n}

III Consider the values of the electromagnetic field everywhere in **the infinite volume outside** the surface A **at the initial time**; that is, consider $\vec{e}(\vec{r}, t_0), \vec{h}(\vec{r}, t_0)$

IV Consider the values of the tangential component of the electric (or magnetic) field upon the surface A at any time after the initial one; that is, consider $\hat{n} \times \vec{e}$ (or $\hat{n} \times \vec{h}$) **on the boundary at any time**

The Uniqueness Theorem states that the electromagnetic field produced by the source in (I) within the **infinite volume V outside** the surface A in (II), enforcing **the initial condition** in (III) and **the boundary condition** in (IV) is unique.

Uniqueness (PD-Interior Problem)

- I Consider a source distribution $\vec{j}(\vec{r}, t)$ with its associated electromagnetic field (\vec{e}, \vec{h})
- II Consider a (smooth) surface A with an everywhere defined unit normal \hat{n}
- III Consider the values of the electromagnetic field everywhere in **the finite volume V** bounded by the surface A **at the initial time**; that is, consider $\vec{e}(\vec{r}, t_0), \vec{h}(\vec{r}, t_0)$
- IV Consider the values of the tangential component of the electric (or magnetic) field upon the surface A at any time after the initial one; that is, consider $\hat{n} \times \vec{e}$ (or $\hat{n} \times \vec{h}$) **on the boundary at any time**

The Uniqueness Theorem states that the electromagnetic field produced by the source in (I) within the **finite volume V bounded by the surface A** in (II), enforcing **the initial condition** in (III) and **the boundary condition** in (IV) is unique.

Uniqueness (PD-Interior Problem)

Source distribution: $\vec{J}(\vec{r})$

$$\vec{E}_1(\vec{r}), \vec{H}_1(\vec{r})$$

$$\vec{E}_2(\vec{r}), \vec{H}_2(\vec{r})$$

Field difference: source distribution $\vec{J}_0(\vec{r}) = 0$

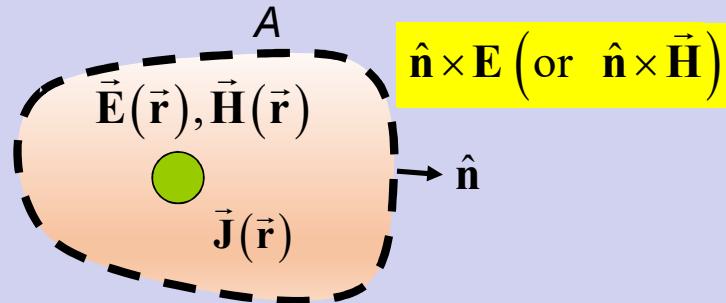

$$\vec{E}(\vec{r}) = \vec{E}_1(\vec{r}) - \vec{E}_2(\vec{r})$$

$$\vec{H}(\vec{r}) = \vec{H}_1(\vec{r}) - \vec{H}_2(\vec{r})$$

$$\hat{\mathbf{n}} \times \vec{E}_1(\vec{r}) = \hat{\mathbf{n}} \times \vec{E}_2(\vec{r}) \text{ on the boundary}$$

$$\hat{\mathbf{n}} \times \vec{E}(\vec{r}) = \hat{\mathbf{n}} \times \vec{E}_1(\vec{r}) - \hat{\mathbf{n}} \times \vec{E}_2(\vec{r}) = 0 \text{ on the boundary}$$

Uniqueness (PD-Interior Problem)

Field difference: source distribution $\vec{J}_0(\vec{r}) = 0$

$$\vec{E}(\vec{r}) = \vec{E}_1(\vec{r}) - \vec{E}_2(\vec{r}) \quad \vec{H}(\vec{r}) = \vec{H}_1(\vec{r}) - \vec{H}_2(\vec{r})$$

$$\hat{\mathbf{n}} \times \vec{\mathbf{E}}(\vec{r}) = \hat{\mathbf{n}} \times \vec{\mathbf{E}}_1(\vec{r}) - \hat{\mathbf{n}} \times \vec{\mathbf{E}}_2(\vec{r}) = 0 \quad \text{on the boundary}$$

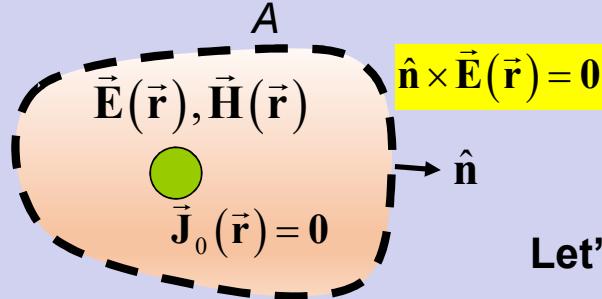

Uniqueness (PD-Interior Problem)

$$\vec{E}(\vec{r}) = \vec{E}_1(\vec{r}) - \vec{E}_2(\vec{r})$$
$$\vec{H}(\vec{r}) = \vec{H}_1(\vec{r}) - \vec{H}_2(\vec{r})$$

Source distribution $\vec{J}_0(\vec{r}) = \mathbf{0}$

$\hat{\mathbf{n}} \times \vec{E}(\vec{r}) = \mathbf{0}$ on the boundary

Uniqueness (PD-Interior Problem)

+ No Homic losses $\sigma = 0$

Uniqueness is not ensured anymore!

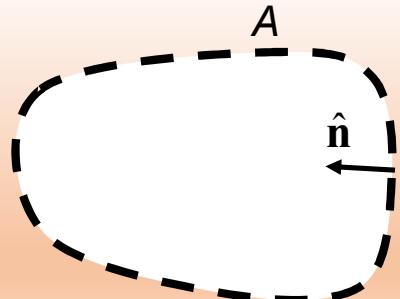

Uniqueness (PD-Interior Problem)

- I Consider a source distribution $\vec{J}(\vec{r})$ with its associated electromagnetic field $\vec{E}(\vec{r}), \vec{H}(\vec{r})$
- II Consider a (smooth) surface A with an everywhere defined unit normal \hat{n}
- IV Consider the values of the tangential component of the electric (or magnetic) field upon the surface A ; that is, consider $\hat{n} \times \mathbf{E}$ (or $\hat{n} \times \vec{H}$) **on the boundary**

The Uniqueness Theorem states that the electromagnetic field produced by the source in (I) within the **finite volume V bounded by the surface A** in (II), enforcing **the boundary condition** in (IV) is unique **provided that the considered medium is lossy**. In a **lossless medium**, instead, the solution is unique **but for a set of resonant solutions**.

Uniqueness (PD-Exterior Problem)

$$\hat{n} \times \mathbf{E} \text{ (or } \hat{n} \times \vec{\mathbf{H}}\text{)}$$

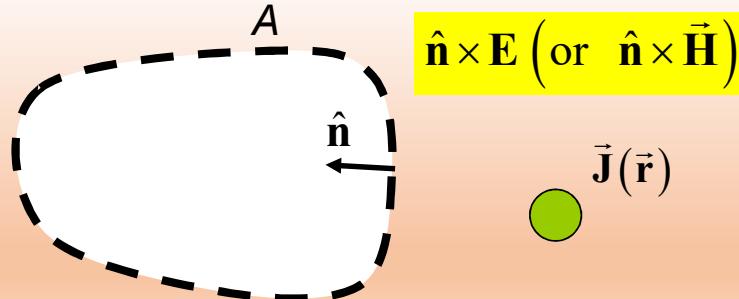

$$\vec{\mathbf{J}}(\vec{\mathbf{r}})$$

$$\vec{\mathbf{E}}(\vec{\mathbf{r}}), \vec{\mathbf{H}}(\vec{\mathbf{r}})$$

- I Consider a source distribution $\vec{\mathbf{J}}(\vec{\mathbf{r}})$ with its associated electromagnetic field $\vec{\mathbf{E}}(\vec{\mathbf{r}}), \vec{\mathbf{H}}(\vec{\mathbf{r}})$
- II Consider a (smooth) surface A with an everywhere defined unit normal $\hat{\mathbf{n}}$
- III
- IV Consider the values of the tangential component of the electric (or magnetic) field upon the surface A ; that is, consider $\hat{\mathbf{n}} \times \mathbf{E}$ (or $\hat{\mathbf{n}} \times \vec{\mathbf{H}}$) **on the boundary**

The Uniqueness Theorem states that

Uniqueness (PD-Exterior Problem)

$$\vec{\mathbf{E}}(\vec{r}), \vec{\mathbf{H}}(\vec{r})$$

Source distribution: $\vec{J}(\vec{r})$

$\vec{\mathbf{E}}_1(\vec{r}), \vec{\mathbf{H}}_1(\vec{r})$ $\vec{\mathbf{E}}_2(\vec{r}), \vec{\mathbf{H}}_2(\vec{r})$

The radiation condition

$$\vec{e} \sim O\left(\frac{1}{r}\right) \quad \vec{h} \sim O\left(\frac{1}{r}\right) \quad \vec{e} - \zeta \vec{h} \times \hat{i}_r \sim o\left(\frac{1}{r}\right) \quad \left(\text{and } \zeta \vec{h} - \hat{i}_r \times \vec{e} \sim o\left(\frac{1}{r}\right) \right) \quad \text{as } r \rightarrow \infty \quad \text{TD}$$

$$\hat{i}_r \cdot \vec{e} = \hat{i}_r \cdot \vec{h} = 0$$

$$\vec{E} \sim O\left(\frac{1}{r}\right) \quad \vec{H} \sim O\left(\frac{1}{r}\right) \quad \vec{E} - \zeta \vec{H} \times \hat{i}_r \sim o\left(\frac{1}{r}\right) \quad \left(\text{and } \zeta \vec{H} - \hat{i}_r \times \vec{E} \sim o\left(\frac{1}{r}\right) \right) \quad \text{as } r \rightarrow \infty \quad \text{PD}$$

$$\hat{i}_r \cdot \vec{E} = \hat{i}_r \cdot \vec{H} = 0$$

$\zeta = \sqrt{\frac{\mu}{\epsilon}}$ is the intrinsic resistance of the medium, **which is assumed homogeneous, isotropic, nondispersive and lossless at infinity**

Note that in the PD, the quantity ζ , called **intrinsic impedance**, can be, in general, complex. At infinity, we assume that ζ is a real quantity.

The radiation condition

$$\vec{e} \sim O\left(\frac{1}{r}\right) \quad \vec{h} \sim O\left(\frac{1}{r}\right) \quad \vec{e} - \zeta \vec{h} \times \hat{i}_r \sim o\left(\frac{1}{r}\right) \quad \left(\text{and } \zeta \vec{h} - \hat{i}_r \times \vec{e} \sim o\left(\frac{1}{r}\right) \right) \quad \text{as } r \rightarrow \infty \quad \text{TD}$$

$$\hat{i}_r \cdot \vec{e} = \hat{i}_r \cdot \vec{h} = 0$$

$$\vec{E} \sim O\left(\frac{1}{r}\right) \quad \vec{H} \sim O\left(\frac{1}{r}\right) \quad \vec{E} - \zeta \vec{H} \times \hat{i}_r \sim o\left(\frac{1}{r}\right) \quad \left(\text{and } \zeta \vec{H} - \hat{i}_r \times \vec{E} \sim o\left(\frac{1}{r}\right) \right) \quad \text{as } r \rightarrow \infty \quad \text{PD}$$

$$\hat{i}_r \cdot \vec{E} = \hat{i}_r \cdot \vec{H} = 0$$

Note that in the PD, the quantity ζ , called **intrinsic impedance**, can be, in general, complex. At infinity, we assume that ζ is a real quantity.

$$\vec{S} = \frac{1}{2} \vec{E} \times \vec{H}^* = \frac{1}{2\zeta} \vec{E} \times (\hat{i}_r \times \vec{E})^* = \frac{1}{2\zeta} \vec{E} \times (\hat{i}_r \times \vec{E}^*) = \frac{1}{2\zeta} \left[(\vec{E} \cdot \vec{E}^*) \hat{i}_r - (\hat{i}_r \cdot \vec{E}) \vec{E}^* \right] = \frac{|\vec{E}|^2}{2\zeta} \hat{i}_r \quad \rightarrow \begin{cases} \vec{S}_1 = \frac{1}{2\zeta} |\vec{E}|^2 \hat{i}_r = \frac{\zeta}{2} |\vec{H}|^2 \hat{i}_r \\ \vec{S}_2 = \mathbf{0} \end{cases}$$

$$\vec{S} = \frac{1}{2} \vec{E} \times \vec{H}^* = (\zeta \vec{H} \times \hat{i}_r) \times \vec{H}^* = -\vec{H}^* \times (\zeta \vec{H} \times \hat{i}_r) = -\left[(\hat{i}_r \cdot \vec{H}^*) \zeta \vec{H} - (\zeta \vec{H} \cdot \vec{H}^*) \hat{i}_r \right] = \frac{\zeta}{2} |\vec{H}|^2 \hat{i}_r$$

$$\vec{A} \times (\vec{B} \times \vec{C}) = (\vec{A} \cdot \vec{C}) \vec{B} - (\vec{A} \cdot \vec{B}) \vec{C}$$

The radiation condition

$$\vec{e} \sim O\left(\frac{1}{r}\right) \quad \vec{h} \sim O\left(\frac{1}{r}\right) \quad \vec{e} - \zeta \vec{h} \times \hat{i}_r \sim o\left(\frac{1}{r}\right) \quad \left(\text{and } \zeta \vec{h} - \hat{i}_r \times \vec{e} \sim o\left(\frac{1}{r}\right) \right) \quad \text{as } r \rightarrow \infty \quad \text{TD}$$

$$\hat{i}_r \cdot \vec{e} = \hat{i}_r \cdot \vec{h} = 0$$

$$\boxed{\vec{E} \sim O\left(\frac{1}{r}\right)} \quad \vec{H} \sim O\left(\frac{1}{r}\right) \quad \vec{E} - \zeta \vec{H} \times \hat{i}_r \sim o\left(\frac{1}{r}\right) \quad \left(\text{and } \zeta \vec{H} - \hat{i}_r \times \vec{E} \sim o\left(\frac{1}{r}\right) \right) \quad \text{as } r \rightarrow \infty \quad \text{PD}$$

$$\hat{i}_r \cdot \vec{E} = \hat{i}_r \cdot \vec{H} = 0$$

$$\iint_{A_\infty} dA_\infty \vec{S}_1(\vec{r}) \cdot \hat{i}_r = \iint_{A_\infty} dA_\infty \frac{1}{2\zeta} |\vec{E}(\vec{r})|^2 = \lim_{r \rightarrow \infty} \int_0^{2\pi} d\varphi \int_0^\pi d\vartheta r^2 \sin\vartheta \frac{|\vec{E}(\vec{r})|^2}{2\zeta}$$

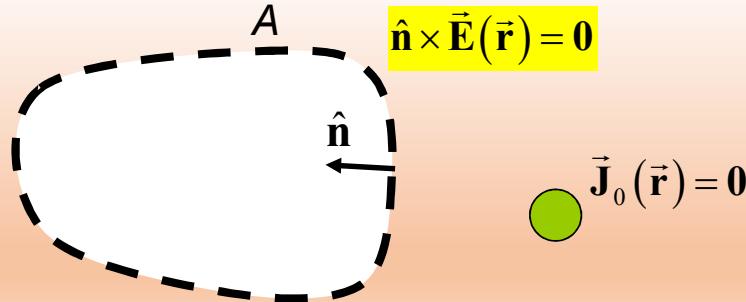

is a finite nonnegative quantity

$$\begin{cases} \vec{S}_1 = \frac{1}{2\zeta} |\vec{E}|^2 \hat{i}_r = \frac{\zeta}{2} |\vec{H}|^2 \hat{i}_r \\ \vec{S}_2 = \mathbf{0} \end{cases}$$

A_∞ is the surface of a sphere of radius $r \rightarrow \infty$
and centered in the origin of the reference system

$$\iint_A dA \Phi(r, \vartheta, \varphi) = \int_0^{2\pi} d\varphi \int_0^\pi d\vartheta r^2 \sin\vartheta \Phi(r, \vartheta, \varphi)$$

Uniqueness (PD-Exterior Problem)

$$\vec{\mathbf{E}}(\vec{\mathbf{r}}), \vec{\mathbf{H}}(\vec{\mathbf{r}})$$

Medium

- Linear
- Isotropic

Source distribution $\vec{J}_0(\vec{r}) = \mathbf{0}$

$\hat{n} \times \vec{E}(\vec{r}) = \mathbf{0}$ on the boundary

Radiation condition at infinity

$$\begin{cases} \epsilon_2 = 0 \\ \mu_2 = 0 \end{cases}$$

+ No Homic losses $\sigma = 0$

Uniqueness is still ensured!

$$\iint_{A_\infty} dA_\infty \frac{1}{2\zeta} |\vec{E}(\vec{r})|^2 + \iiint_V dV \left[\frac{1}{2} \omega_0 \mu_2 |\vec{H}(\vec{r})|^2 + \frac{1}{2} \omega_0 \epsilon_2 |\vec{E}(\vec{r})|^2 + \frac{1}{2} \sigma |\vec{E}(\vec{r})|^2 \right] = 0 \quad \xrightarrow{\text{cvd}} \quad \begin{aligned} \vec{E}(\vec{r}) &= \mathbf{0} \\ \vec{H}(\vec{r}) &= \mathbf{0} \end{aligned}$$

Uniqueness (PD-Exterior Problem)

$$\hat{n} \times \mathbf{E} \text{ (or } \hat{n} \times \vec{\mathbf{H}}\text{)}$$

$$\vec{\mathbf{J}}(\vec{\mathbf{r}})$$

$$\vec{\mathbf{E}}(\vec{\mathbf{r}}), \vec{\mathbf{H}}(\vec{\mathbf{r}})$$

- I Consider a source distribution $\vec{\mathbf{J}}(\vec{\mathbf{r}})$ with its associated electromagnetic field $\vec{\mathbf{E}}(\vec{\mathbf{r}}), \vec{\mathbf{H}}(\vec{\mathbf{r}})$
- II Consider a (smooth) surface A with an everywhere defined unit normal $\hat{\mathbf{n}}$
- IV Consider the values of the tangential component of the electric (or magnetic) field upon the surface A ; that is, consider $\hat{\mathbf{n}} \times \mathbf{E}$ (or $\hat{\mathbf{n}} \times \vec{\mathbf{H}}$) **on the boundary**

The Uniqueness Theorem states that the electromagnetic field produced by the source in (I) within the **infinite volume V outside** the surface A in (II), enforcing **the boundary condition** in (IV) **as well as the radiation condition at infinity** is unique.
