# ACS parte 2 (richiami)

## Argomenti trattati:

- **Cenni sulla Distribuzione di probabilità Gaussiana o Normale**

# Distribuzione Univariata Normale o Gaussiana

È una distribuzione di probabilità continua con **media**  $\mu$  e **varianza**  $\sigma^2$  ( $\sigma$  è la **deviazione standard**).  $x$  è una variabile casuale (v.c.),  $\forall x \in \mathbb{R}$ :

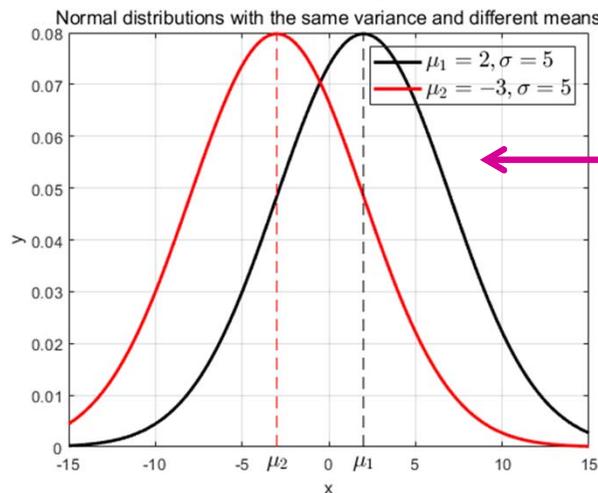

$$x \in \mathcal{N}(\mu, \sigma) \Leftrightarrow$$

$$p(x) = \frac{1}{\sigma\sqrt{2\pi}} \exp\left\{-\frac{1}{2}\left(\frac{x-\mu}{\sigma}\right)^2\right\}$$

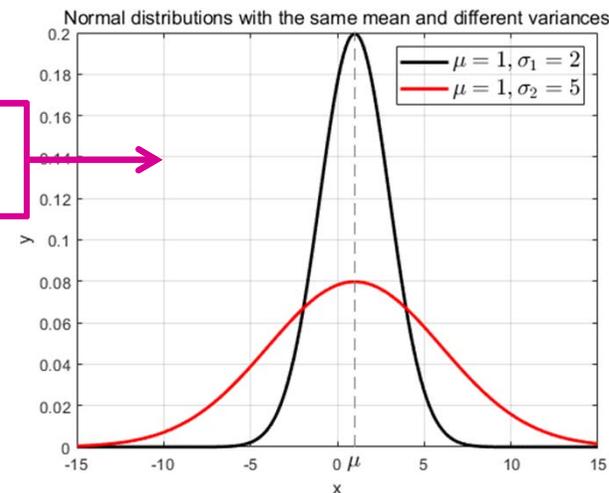

```
N=1000; x=linspace(-15,15,N)';  
mu1=2; sig1=5; y1=pdf('Normal',x,mu1,sig1);  
mu2=-3; sig2=5; y2=pdf('Normal',x,mu2,sig2);  
plot(x,y1,'k',x,y2,'r'); grid on  
xlabel('x'); ylabel('y')
```

```
N=1000; x=linspace(-15,15,N)';  
mu1=1; sig1=2; y1=pdf('Normal',x,mu1,sig1);  
mu2=1; sig2=5; y2=pdf('Normal',x,mu2,sig2);  
plot(x,y1,'k',x,y2,'r'); grid on  
xlabel('x'); ylabel('y')
```

La **media**  $\mu$  (o valor medio o valore atteso) corrisponde al valore con massima probabilità.  
La **varianza**  $\sigma^2$  governa la minore o maggiore dispersione attorno al valor medio.

medie diverse, stessa varianza

stessa media, varianze diverse

La **Distribuzione Normale Standard** ha media  $\mu=0$  e varianza  $\sigma^2=1$

# Campioni random da Distribuzione Normale Univariata

$$x \in \mathcal{N}(0,1) \Leftrightarrow$$

$$p_S(x) = \frac{1}{\sqrt{2\pi}} \exp\left\{-\frac{1}{2}x^2\right\}$$

v.c. standardizzata

$$x = \frac{x^* - \mu}{\sigma}$$

$$x^* \in \mathcal{N}(\mu, \sigma) \Leftrightarrow$$

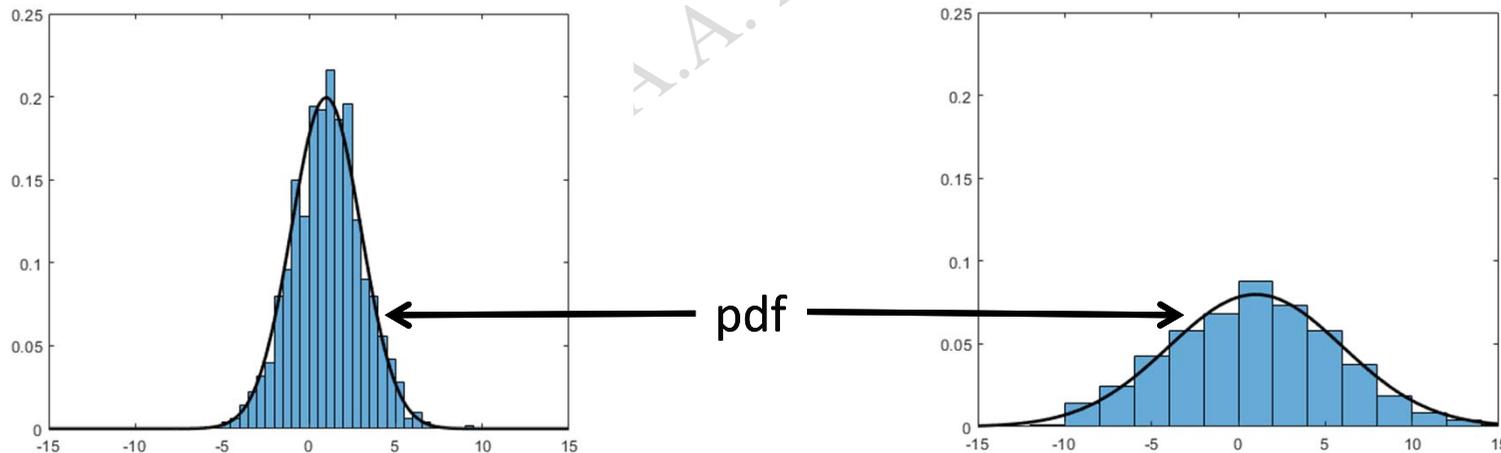

$$p_{\mathcal{N}}(x^*) = \frac{1}{\sigma\sqrt{2\pi}} \exp\left\{-\frac{1}{2}\left(\frac{x^* - \mu}{\sigma}\right)^2\right\}$$

La funzione `randn()` genera un campione da distribuzione normale standard  $\mathcal{N}(\mu=0, \sigma=1)$

```
N=1000; x=linspace(-15,15,N)';  
mu=1; sig=2; y=pdf('Normal',x,mu,sig);  
Xi=mu + sig*randn(N,1);  
histogram(Xi,'Normalization','pdf'); hold on  
plot(x,y,'k','LineWidth',2)
```

```
N=1000; x=linspace(-15,15,N)';  
mu=1; sig=5; y=pdf('Normal',x,mu,sig);  
Xi=mu + sig*randn(N,1);  
histogram(Xi,'Normalization','pdf'); hold on  
plot(x,y,'k','LineWidth',2)
```

## Istogramma dei campioni random

# Distribuzione Multivariata Normale o Gaussiana

$\vec{x}$  è una variabile casuale (v.c.) vettoriale,  $\forall \vec{x} \in \mathbb{R}^n$ :

$\vec{\mu}$ : vettore delle medie

$\Sigma$ : matrice di covarianza

$$\vec{x} \in \mathcal{N}(\vec{\mu}, \Sigma) \Leftrightarrow$$

$$p(\vec{x}) = \frac{1}{\sqrt{2\pi|\Sigma|}} \exp\left\{-\frac{1}{2}(\vec{x} - \vec{\mu})^T \Sigma^{-1} (\vec{x} - \vec{\mu})\right\}$$

$\det(\Sigma)$

```
N=81; [x,y]=meshgrid(linspace(-10,10,N));
Z=[x(:) y(:)];
mu=[2 -1]; sig=[6 0.8;0.8 3];
p=mvnpdf(Z,mu,sig); p=reshape(p,N,N);
mesh(x,y,p) ; axis tight; box on; hidden off
xlabel('x'); ylabel('y'); zlabel('p(x,y)')
```

```
N=81; [x,y]=meshgrid(linspace(-10,10,N));
Z=[x(:) y(:)];
mu=[-2 3]; sig=[2 0.8;0.8 2];
p=mvnpdf(Z,mu,sig); p=reshape(p,N,N);
mesh(x,y,p) ; axis tight; box on; hidden off
xlabel('x'); ylabel('y'); zlabel('p(x,y)')
```

$$\vec{\mu} = \begin{pmatrix} 2 & -1 \end{pmatrix}$$

$$\Sigma = \begin{pmatrix} 6 & 0.8 \\ 0.8 & 3 \end{pmatrix}$$

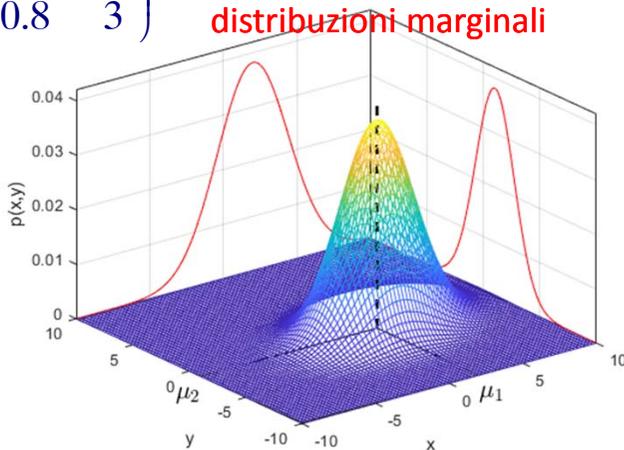

Distribuzione Normale Bivariata

$$\vec{x} \in \mathbb{R}^2$$

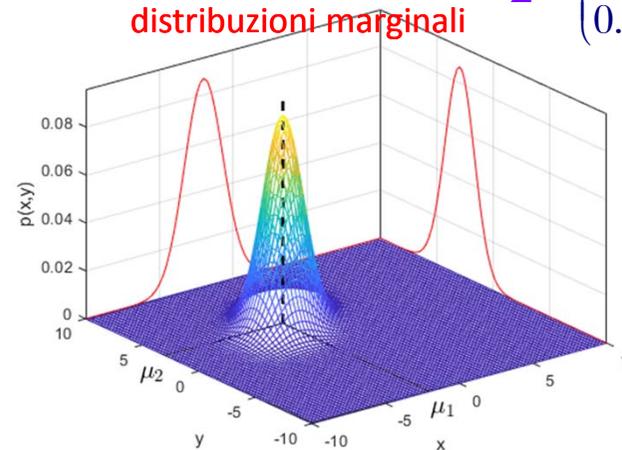

$$\vec{\mu} = \begin{pmatrix} -2 & 3 \end{pmatrix}$$

$$\Sigma = \begin{pmatrix} 2 & 0.8 \\ 0.8 & 2 \end{pmatrix}$$
